Provincial Highways

Traffic Volumes 1985

King's Highways • Secondary Highways • Tertiary Roads

Program Planning Information
Traffic Characteristics
June, 1986

ISSN 0822-6873

PREFACE

This publication with an annual distribution of 1500 copies, is the most widely used reference document for traffic volume information by this ministry and other agencies. It contains basic reference information on the traffic usage of the provincial highway network for anyone requiring a measurement of annual and seasonal data.

To complement the volume data, which forms the main body of the report, the first part contains a number of summaries and overall system indicators. Various relationships among highway classification or type, traffic accidents, volume ranges, distance and travel experience are drawn to give comparative measurements for the entire provincial highways network.

The main body of this report contains selected information. Additional information on traffic characteristics such as traffic composition, peak hours or intersection usage, may be obtained by contacting the Highway Program Planning Office or the Regional Traffic Offices.

For a comprehensive overview of all traffic volume aspects, the P.C.S. Report and the Historical and Short Term Projections listings provided by the Highway Program Planning Office, should be consulted.

R.K. Kher,
Manager,
Highway Program Planning Office.

	Selected 7000 Series Highways	II-198

INTRODUCTION

This publication contains information pertaining to traffic volumes and accident rates on roads under Provincial jurisdiction as of December 31, 1985. The book is divided into two parts.

PART I

The information in this part is included for policy analysis and program planning purposes. It includes summaries about the overall Provincial Highways system and not specifics related to individual volume sections. The system indicators are developed from travel experience, accident data and highway geometrics.

PART II

The information in this part is a detailed listing of traffic volumes on Provincial Highways, section by section.

The highway network is divided into 2,721 sections for reporting purposes. Seasonal traffic volume variations are estimated for each section reported. Although local conditions cause variations in the volume within the sections, the volumes shown are considered to adequately represent the section.

On highways possessing more than one route member, such as Highways 35 and 115, the volume information is referenced to the lower number highway. When an overlap occurs between a freeway and non-freeway, reference is made to the freeway route number. The freeways are Highways 400 to 427 and the Q.E.W.

The following is a KEY to reading the listings:

LOCATION DESCRIPTION

A statement identifying the start or ending of a section. Frequently used abbreviations (over the commonly known) include:

IC	:	interchange
JCT	:	junction
LTS	:	limits
BDY/BDRY	:	boundary
TWP	:	township
CORS	:	corners
REG	:	regional
BR	:	bridge
C	:	concession
CTY	:	county
L	:	lot
R	:	river

DISTANCE (KM)

The length of the section in kilometres reported to one decimal place.

PATTERN TYPE

One of 14 pattern types that represent the seasonal variability of the traffic flow on the section indicated.

The 14 pattern types represent the traffic flow variation on the whole network. They include:

1.	UC	:	urban commuter
2.	SC	:	suburban commuter
3.	C	:	commuter
4.	IC	:	intermediate commuter
5.	CR	:	commuter recreation
6.	IR	:	intermediate recreation
7.	CTR	:	commuter - tourist - recreation
8.	IT	:	intermediate tourist
9.	LT	:	low tourist
10.	T	:	tourist
11.	HT	:	high tourist
12.	LR	:	low recreation
13.	R	:	recreation
14.	HR	:	high recreation

The first three are generally referred to as Low Variation Curves (or Commuter Traffic); the next five as Intermediate Variation Curves (a blend of all types of traffic); and the last six as High Variation Curves. For this last group, the first three represent tourist travel and the second three, recreational travel; this sub-grouping is distinguished by the relationship of weekend to weekday traffic.

A graphical presentation of these pattern types has been included on the following page.

AADT

Annual Average Daily Traffic; which is defined as the average twenty-four hour, two-way traffic for the period, January 1st to December 31st.

SADT

Summer Average Daily Traffic; which is defined as the average twenty-four hour, two-way traffic for the period, July 1st to August 31st, including weekends.

SAWDT

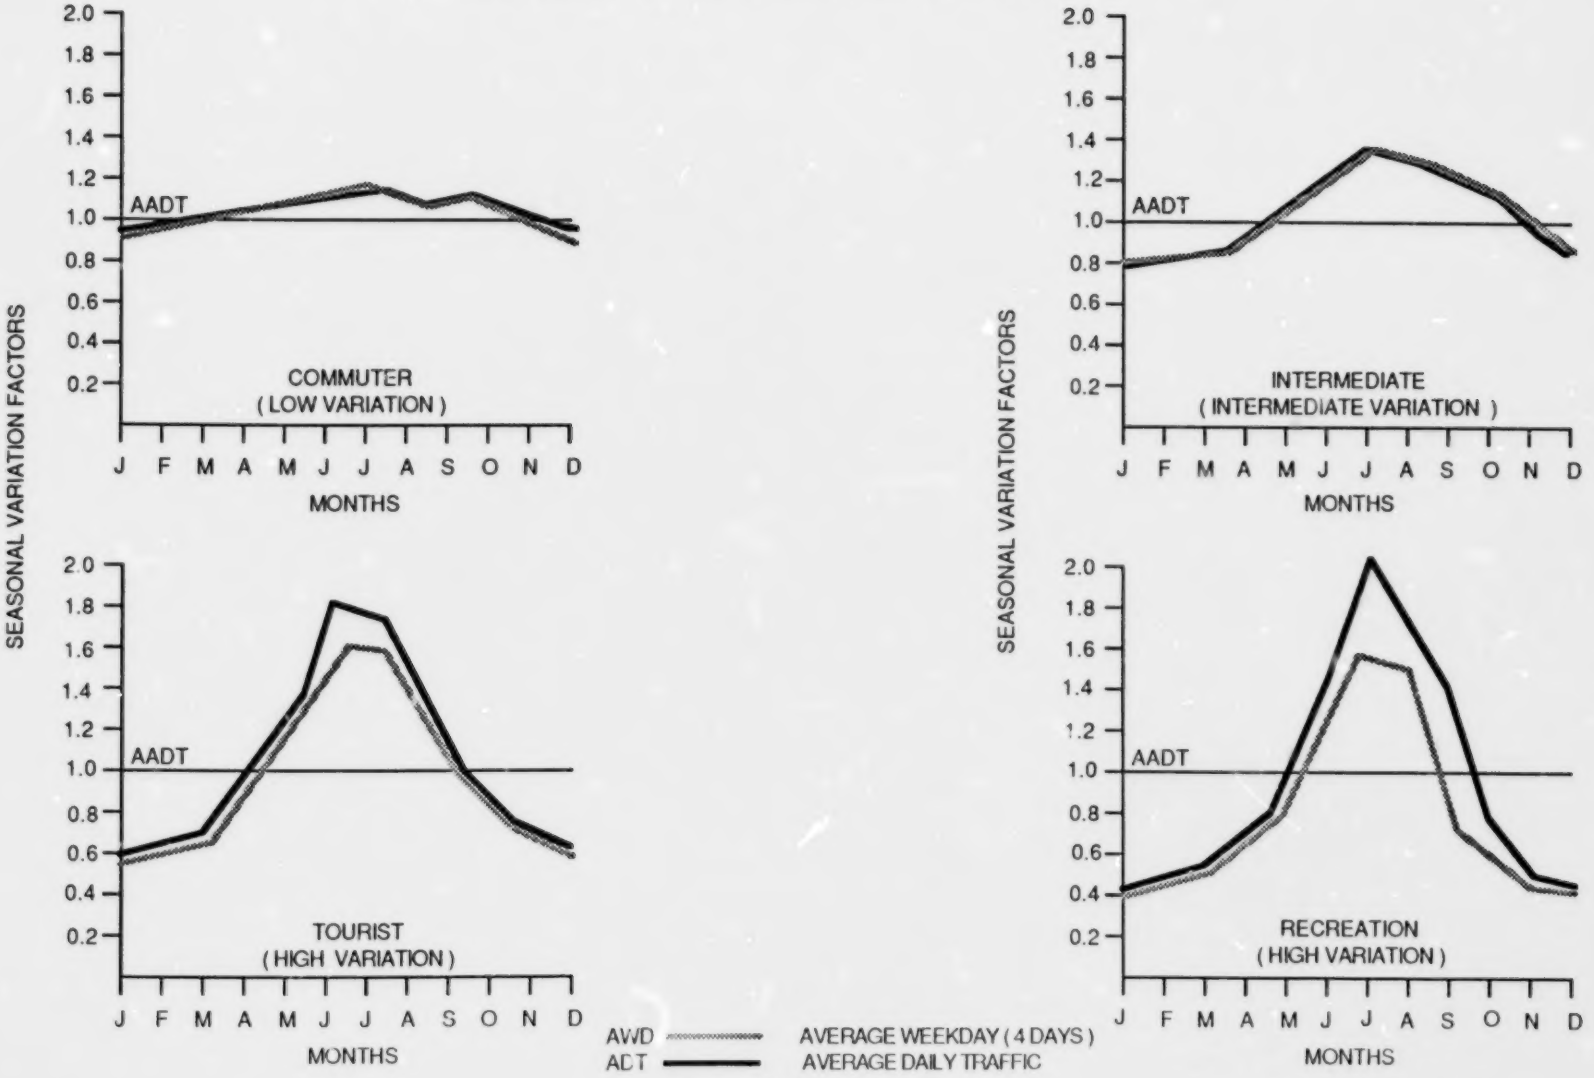
Summer Annual Weekday Daily Traffic; which is defined as the average twenty-four hour, two-way, weekday traffic for the period, July 1st to August 31st, excluding weekends. Weekend traffic is defined to start at noon on Friday and end at noon on Monday for a normal short weekend.

A long holiday weekend would have an additional day either commencing at noon on the Thursday or ending at noon on the Tuesday, depending on whether the holiday falls on the Friday or the Monday.

WADT

Winter Average Daily Traffic; which is defined as the average twenty-four hour, two-way traffic for the period, December 1st to March 31st, including weekends.

PATTERN TYPES VARIATION CURVES



AR

Accident Rate; which is defined as the number of reportable accidents occurring annually on a particular highway section for every million vehicle kilometres (Mv·km) travelled on that section during the same period. "Reportable Accidents" are those causing any death, injury or damage exceeding a certain established amount. In 1978, the damage amount was increased from $200 to $400, and in 1985 from $400 to $700.

Mathematically, the accident rate is calculated as follows:

AR = the number of accidents for a given year divided by the Mv·km, noting the following:

a. Multiple vehicle collisions (i.e., chain reactions are generally considered as one accident unless the reporting police officer decides otherwise).

b. Accidents on freeway ramps are totally excluded from sectional and total system accident rate calculations.

c. The Mv·km is calculated as follows:

$$\text{Mv·km} = \frac{\text{AADT} \times 365 \text{ days} \times \text{DIST (km)}}{1{,}000{,}000}$$

If no accidents have occurred on a given section, the accident rate is shown as blank, not zero.

NOTE

The user of this publication should realize that the reported data are 'estimated values'. Since traffic volumes are not static, direct field measurements are accurate only for the time of the count. Also, the size of the Provincial Highways network makes it impractical to measure each section annually. Thus, approximately one third of the reported sections are counted each year. The following three methods of measuring traffic volumes are employed:

1. Permanent Counting Stations: At nineteen locations across the Province counts are taken for each hour of the year.

2. Inventory Counting Stations: Each unique volume section has a set location where traffic volumes are sampled on a cyclical basis by season and year.

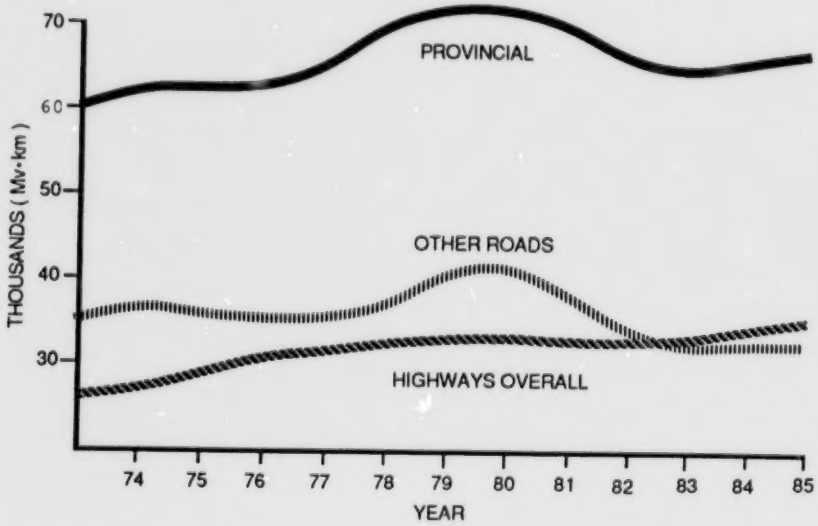
3. Request Counting Stations: Traffic volumes are measured at random locations as needed to address operational or planning concerns.

Using the available traffic volume information and historical trends, estimates are made for each volume section.

PART I

Overall System Summaries

HISTORICAL TREND OF TRAVEL EXPERIENCE



HIGHWAYS OVERALL

- Increase of MV·km is due to TRAFFIC VOLUMES.
  Highway Network decreased by 0.2%
  Travel Experience increased by 3.6 %
- Average growth of 1000 MV·km per year up to 1978 levelled off and then changed to decreases in 1981 and 1982.
- In 1983, MV·km increased by 700 and in 1984, an increase of approximately 800 was measured. In 1985, a substantial increase of 1250 MV·km occurred. Almost all Traffic Volume growth occured on Freeways.

HISTORICAL TREND OF ACCIDENT RATE

HIGHWAYS OVERALL

- Over the past five years, accident rates have basically remained level for all types of highways.
- The rate has remained constant because increases/decreases in the NUMBER of accidents have been offset by corresponding increases/decreases in MV·km.
- The downtrend from 1975 to 1978 was caused by changes in accident reporting methods. However, increases in the damage amount for reportable accidents in 1978 and 1985, did not significantly affect the highway accident rates.

NOTE. 1. All reported Freeway ramp accidents have been excluded.

2. Hwys. Overall includes Tertiary roads.

3. Mv km is million vehicle kilometres of travel.

4. Mv km for Provincial Total & Other Roads is based on total taxed gasoline & motor fuel sales and average fuel consumption (1985 = 20.5L / 100km).

5. Mv km for Hwys. Overall (and components) is based on estimated traffic volumes and reported section lengths.

6. RATE is the number of accidents per million vehicle kilometres of travel (Mv km).
